QUALITY ENGINEERING · TEST AUTOMATION · AI-ASSISTED TESTING

Quality engineering for insurance platforms, accelerated by AI.

Software Quality Analyst II with 9+ years testing life, annuity and reinsurance platforms. I build Playwright and TypeScript automation, validate SOAP and web-service integrations, and use LLM-based tools to generate test assets and remove repetitive manual checks.

01 / About

I work on TPP, a new business and underwriting platform that takes an application from case import through requirements management and underwriting to policy issue. My focus is keeping those end-to-end flows reliable release after release, using automation to catch regressions early and clear test design to cover the business rules.

I also build AI-assisted tools around the testing work itself: generators that turn JIRA stories, scope documents and estimates into test cases and plans, and validators for DTCC and NSCC files and carrier PDF forms. The goal is simple: less repetitive checking, faster feedback, fewer defects reaching production.

ROLE
Software Quality Analyst II

SINCE
May 2017

DOMAINS
Life, annuities, reinsurance

BASED IN
Coimbatore, India

Test automation | Playwright | TypeScript | API testing | AI-assisted testing | LLM tooling | Agile

02 / Skills

Expert

Playwright with TypeScript | End-to-end test automation | Regression and integration testing | API testing with SoapUI and Postman | Test design from user stories and acceptance criteria | Defect management

Proficient

AI-assisted test design and scripting | SQL Server | JIRA | TestRail | Azure DevOps | WildFly (Linux and Windows) | iHub | Smoke testing

Growing

LLM prompting and agent workflows | Python | JavaScript | Flask and FastAPI | JIRA and Confluence APIs | PyMuPDF | JUnit

03 / Experience

Software Quality Analyst II

Zinnia · May 2017 to present

- Build and maintain Playwright and TypeScript automation for critical end-to-end business workflows, extending the suite with each release to widen regression coverage and speed up release cycles.
- Built a client-specific AI agent that generates test cases and integration test plans from JIRA stories, scope documents and estimates, in the client's standard plan format.

- Received the Deliver Value award under Values in Action for building AI tools that reduce day-to-day manual activity.
- Use AI-assisted tools across the testing cycle: test case creation, automation script development and debugging.
- Turn JIRA user stories, business requirements and acceptance criteria into test plans, scenarios and cases.
- Validate SOAP integrations with SoapUI and JUnit and web services with Postman; test system interfaces and add new products through batch processing.
- Deploy builds to WildFly and confirm they are stable before testing.
- Raise and track defects through to verification, and advise stakeholders during sprint and enhancement discussions based on test results.

American Family Life Insurance

TPP Runtime for life insurance: case import, case management, requirements management and underwriting on one platform, used by new business users, service users and underwriters.

General Reinsurance Corporation, US

TPP Runtime for reinsurance new business and underwriting, used by data ingestion specialists, underwriters, medical directors and administrative staff.

Playwright · TypeScript · SoapUI · Postman · SQL Server · WildFly · JIRA · TestRail · Azure DevOps · LLM tooling

04 / Education

Bachelor of Engineering, Electrical & Electronics Engineering

Anna University · 2011 to 2014

05 / Projects

AI-assisted tools I built to replace repetitive manual checks in insurance and annuity workflows. They run locally, in the browser or on localhost, and files are never uploaded.

AI FOR QA FEATURED

Client-specific AI test case generator

An LLM-powered agent that generates test cases and integration test plans for a specific insurance client, following that client's change-order process and standard plan format. It reads a JIRA story with its acceptance criteria, comments, screenshots and linked Confluence documents. For change requests it combines the scope document and the estimate: the estimate sets scenarios and case counts, the scope sets behavior and expected results, and conflicts between the two are flagged for review. Output goes to Excel, JSON or Markdown; the saved plan can be edited and rebuilt without another model call. Works with OpenAI or Anthropic models and ships with a Cursor skill.

Python · LLM agents · OpenAI / Anthropic · JIRA API · Confluence API · Pydantic · Typer · openpyxl

ANNUITIES

DTCC field mapper

Maps a fixed-width DTCC APP/SUB transaction file to a master dictionary workbook, validates every field against the workbook code lists and exports a corrected file. One Application Control Number edit updates every record. Runs as a shareable single-folder web app.

JavaScript · SheetJS · Python · FastAPI

ANNUITIES

NSCC POV file validator

Validates Positions Focused, New and Full Refresh files against the NSCC layout, applying record-level and cross-record business rules, and lets users browse errors by contract before submission.

JavaScript · Python · openpyxl

SETTLEMENT

STL contract field parser

A single-file browser tool that turns NSCC STL fixed-length files into readable per-contract breakdowns, resolves coded values to descriptions and exports to CSV or Excel.

JavaScript · HTML · SheetJS

FORMS

PDF forms updater

Fills both fillable and flat carrier PDF forms using per-form overlay templates, including checkmarks and signature fields, and downloads the completed PDF.

Python Flask PyMuPDF

FORMS

Annuity application PDF editor

Extracts 246 fields from a flat fixed index annuity application, lets users edit them by section and writes an updated PDF in the original layout.

Python Flask PyMuPDF

06 / Accomplishments

VALUES IN ACTION

Deliver Value award

Recognized for building AI tools that cut day-to-day manual effort for the team, including test case and test plan generation and validators for industry file formats.

AI-assisted tools Productivity Quality engineering

07 / Contact

Open to conversations about quality engineering, test automation and AI-assisted testing.
