9+
Years in quality engineering

2
Domains: insurance and reinsurance

6
AI-assisted tools built

SUMMARY

Software Quality Analyst II with 9+ years testing life, annuity and reinsurance platforms. I build Playwright and TypeScript automation, validate SOAP and web-service integrations, and use LLM-based tools to generate test assets and remove repetitive manual checks. Recipient of the Deliver Value award for AI tools that reduce day-to-day manual effort.

EXPERIENCE

Software Quality Analyst II

Zinnia · May 2017 to present · Insurance and reinsurance (TPP platform; American Family Life Insurance, General Reinsurance Corporation)

- Build and maintain Playwright and TypeScript automation for critical end-to-end workflows, including a 20-step annuity contract creation flow, widening regression coverage and speeding up release cycles.
- Built a client-specific AI agent that generates test cases and integration test plans from JIRA stories, scope documents and estimates.
- Validate SOAP integrations with SoapUI and JUnit and web services with Postman; test system interfaces and batch processing.
- Turn user stories, requirements and acceptance criteria into test plans and cases; track defects to verification and advise stakeholders in sprint discussions.
- Write a reusable QA reference guide per change request (SQL query library, data dictionary, validation strategy, defect template); five so far, being consolidated into a QA handbook.
- Received the Deliver Value award (Values in Action) for AI tools that reduce day-to-day manual activity.

SELECTED PROJECTS

- **Client-specific AI test case generator.** LLM agent that generates test cases and integration test plans for a specific insurance client from JIRA stories, scope documents and estimates, in the client's standard plan format.
- **End-to-end contract creation automation.** Playwright and TypeScript flow that automates a 20-step annuity contract creation in a policy administration system, driven by Excel test data with Excel execution reports.
- **DTCC field mapper.** Maps DTCC APP/SUB transaction files to a master dictionary workbook, validates against code lists and exports a corrected file.
- **NSCC POV file validator.** Validates Positions Focused, New and Full Refresh files against the NSCC layout with record-level and cross-record rules.
- **STL contract field parser.** Browser tool that turns NSCC STL fixed-length files into readable per-contract breakdowns with coded values resolved; exports to CSV or Excel.
- **PDF form tools.** Fill and edit fillable and flat carrier PDF forms through per-form templates (PDF forms updater, annuity application editor).

CORE SKILLS

Test automation: Playwright, TypeScript, data-driven end-to-end and regression suites

API and integration: SoapUI, Postman, JUnit, SOAP and web services

AI-assisted QA: LLM prompting, agent workflows, AI-assisted test design and scripting

Tools and platforms: JIRA, TestRail, Azure DevOps, SQL Server, WildFly, iHub

Also: Python, JavaScript, Flask, FastAPI

ACCOMPLISHMENT

VALUES IN ACTION

Deliver Value award

Recognized for building AI tools that cut day-to-day manual effort for the team, including test case and test plan generation and validators for industry file formats.

EDUCATION

Bachelor of Engineering, Electrical & Electronics Engineering

Anna University · 2011 to 2014

CERTIFICATION

Learn Playwright with TypeScript (Web & API Testing)

Udemy · July 2026 · 70 hours · Instructor: Pavan Kumar
