Dear Hiring Manager,

I am writing to express my interest in quality engineering and test automation roles. I have spent more than nine years testing life, annuity and reinsurance platforms. I have worked at Zinnia since May 2017 and am now a Software Quality Analyst II. I care about keeping complex, regulated business flows reliable release after release.

In my current work I build and maintain Playwright and TypeScript automation for critical end-to-end workflows, validate SOAP and web-service integrations with SoapUI, JUnit and Postman, and turn user stories and acceptance criteria into clear test plans. Beyond regular testing, I built a 20-step automation that creates an annuity contract from product selection through payment, exchange and cash batch release. It is driven by Excel data and produces Excel run reports that stakeholders can read.

I also use AI to remove repetitive effort. I built a client-specific agent that generates test cases and integration test plans from JIRA stories, Confluence pages, scope documents and estimates, and tools that validate industry files and carrier PDF forms. This work earned the Deliver Value award under Values in Action, and I completed a 70-hour course on Playwright with TypeScript to keep my automation skills current.

I document what I learn. I am writing reusable QA reference guides, with SQL query libraries and data dictionaries for each change request, and I plan to combine them into a handbook for future projects. I have done all of this while continuing to work as a billable resource on client delivery.

I would welcome the chance to talk about how I can help your team improve quality with automation and AI-assisted testing. My portfolio, one-page profile and detailed profile are available at pattulingam.github.io. Thank you for your time and consideration.

Sincerely,

Pattulingam K
